

ABSEIL ACCESS LTD

Reference Project

Industrial Coatings

Location: Guyed radio masts, nationwide.

Date: 2000 to 2003

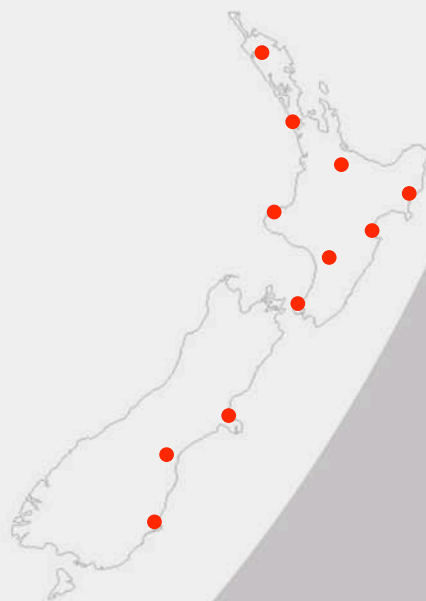

Client: Radio New Zealand

Radio New Zealand contracted Abseil Access Ltd to apply corrosion protection to the guy wires on radio masts nationwide.

This project involved masts up to 154m high and 12 guy wires. The work was completed while the masts remained live. This involved using stainless steel weave radiation suits and crossing guy wire insulators with voltages of over 8000v.

Specific systems, procedures and tools were developed for this unique project. Each guy wire had two applications of Almasol corrosion inhibitor.

The base tensioners were also treated with a full preparation and petroleum wrap.
