

ABSEIL ACCESS LTD

Reference Project

Sign Construction

Location: Wellington International Airport

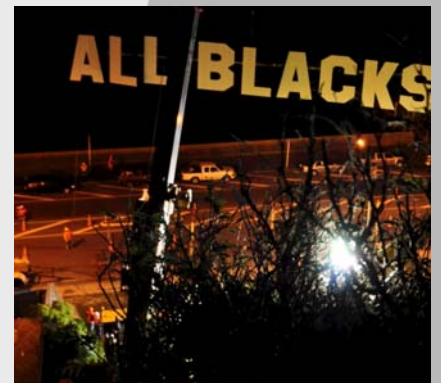

Date: July–August 2011

Client: Mainzeal

Abseil Access was chosen by Mainzeal as the preferred sub-contractor for this high visibility project. Initially the work involved the installation of 26 5m-long Ischbecke 30-11 rock anchors into the greywacke rock that forms Miramar Hill.

Shortly after commencement of the anchor drilling Abseil Access was also tasked with constructing the eight reinforced concrete sign abutments (comprising more than 6m³), installing the base steelwork and providing site supervision during the site welding and night installation of the 10 tonne sign itself.

The site overlooks Evans Bay and the northern end of Wellington International Airport and so is exposed to the winds for which Wellington is renowned. Even during the once-in-a-generation snow storm that swept up the country the crew were able to undertake work on site. Despite all that mother nature could throw at the site, the steelwork was in place on schedule for the installation of the sign in time for the first game of the Rugby World Cup less than a week later.
