

## BRIDGES

We offer construction and repair services, plus comprehensive design and build packages

Our specialist bridge construction team and repair team works all over New Zealand. However remote the location or challenging the design, we have the expertise and gear to handle it.

Our comprehensive knowledge of materials and systems means we can design the best and most cost-effective solution for any situation, whether it be a single person bridge or one for vehicles.

### Design and build

Our expertise and engineering skills enable us to offer a design and build package that can take your project from concept to cost effective completion.

Our lightweight gear and flyable machinery includes:

- diggers
- drill rigs
- compressors
- grout pump set-ups

We can confidently anchor into any ground type, excavating ground and installing concrete anchors where necessary. We have rigging, power and air tools specifically for all aspects of bridge construction.

We often work in back country locations far from the road end, sometimes using helicopters to access the site and with our crew living on-site.

Our satisfied clients and portfolio of completed projects are our best advertising. Read all about them on our website or give us a call.
